

1. Create a VF tab

Custom Tabs

You can create new custom tabs to extend salesforce.com functionality or to build new application functionality.

Custom Object Tabs look and behave like the standard tabs provided with salesforce.com. Web Tabs allow you to embed external web applications and content within the salesforce.com window. Visualforce Tabs allow you to embed Visualforce Pages. Lightning Component tabs allow you to add Lightning Components to the navigation menu in Salesforce1. Lightning Page tabs allow you to add Lightning Pages to the navigation menu in Salesforce1.

Sites

Help for this Page

What is a Site?

Force.com sites enables you to create public websites and applications that are directly integrated with your Salesforce.com organization—without requiring users to log in with a username and password. You can publicly expose any information stored in your organization through pages that match the look and feel of your company's brand. Use sites to create public community sites to gather customer feedback, branded login and registration pages for your portals, Web forms for capturing leads, and so on.

Because sites are hosted on Force.com servers, there are no data integration issues. And because sites are built on native Visualforce pages, data validation on collected information is performed automatically. You can allow users to access your site through your unique Force.com domain and URL, or you can register your own branded domain or subdomain to redirect to your site.

Create multiple sites that appeal to different audiences and satisfy your company's various business needs. For example, a software company could create one site for new developers, another for customers, and a third for marketing.

Your Force.com Domain: MyCompany.force.com

Your Sites: MyCompany.force.com/developers, MyCompany.force.com/customers, MyCompany.force.com/marketing

Create Your Force.com Sites

Your Force.com domain name is **trust-petstore-developer-edition.na24.force.com**
