

Trust Tag is a java script file hosted by Resilient Access that executes when the page that contains the SCRIPT tag is loaded in the browser. Trust Tag is a Resilient Access relying party implementation. The Trust Tag script tag should be the first script tag defined in the head tag of the HTML source.

There are two variations of Trust Tag:

- [Web Page](#) - Useful for enforcing a policy on individual web pages or parts of an application
- [Web Application](#) - Useful for enforcing a policy on web applications to securely control access to a web application
